Lab Separation and Workflow Tools

Immobilon® NOW rolls offer the convenience of pre-cut sheets with the flexibility of rolls in the formats you depend on: Immobilon®-E, Immobilon®-P, Immobilon®-FL and Immobilon®-PSQ membranes.

The optional **Immobilon® NOW** Dispenser adds even more convenience by offering a complete solution to measure, cut and store the transfer membrane. Simply retract the unused membrane into the container, and always see when it's time to refill.

Stericup® Quick Release Filtration System

Same Trusted Performance – Enhanced Design: Here's what's new and improved in the Stericup® Quick Release Filtration System:

What's new?

The Quick Release filter funnel disconnects from the receiver bottle with just a quarter turn-reducing the likelihood of spillage and making it easier to manipulate on the bench or under the hood.

Forest, ample writing surface on the receiver bottle and lighter cap color facilitate clear labeling to improve legibility and reduce errors on critical notations.

Click seal confidence cap is flanged and modified to enable a firm grip in wet or dry conditions and tactile stop confirms secure closure No more worries about the possibility of contamination or spillage of sterilized content.

What's better?

Bold Product identification on the Streitop® filter funnel plainly displays membrane characteristics, including composition and pore size, for rapid, application - appropriate filter selection.

Stericup® filter packaging ensures sterility during transport and storage, and new easy-open feature provides a lab on every comer.

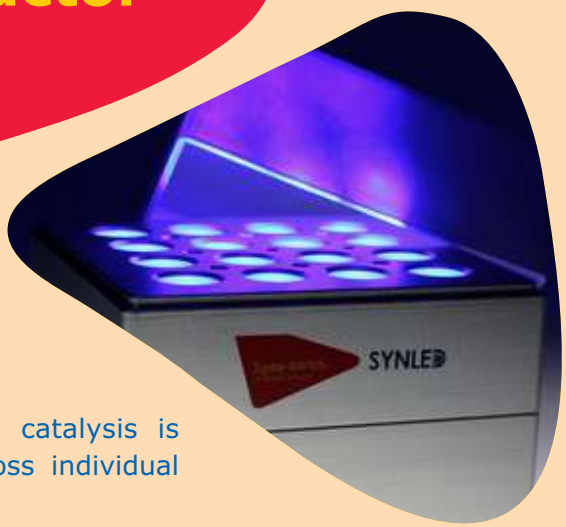
Improved peel-and-stick label on the sterile bag clearly denotes filter lot and part number. Simply peel and place in a lab notebook for accurate tracking and reference.

Designed for single use. The Stericup® Quick Release reduces the likelihood of inadvertent re-use, ensuring media starts sterile and stays sterile.

HPLC certified PTFE Millex in 33mm format: Replaces 25mm, offers lowest extractables, low analyte binding and broad chemical compatibility

New Introductions

SynLED Parallel Photoreactor (Z742680) New Introduction



A long-standing challenge in the field of photoredox catalysis is reproducibility between reaction setups as well as across individual reactions performed with the same setup.
Our SynLED Parallel Photoreactor (Z742680) seeks to alleviate these issues by enabling small-scale photocatalysis reaction screening as well as rapid library generation while ensuring high levels of consistency across reactions and between runs.

Advantages of SynLED Photoreactor

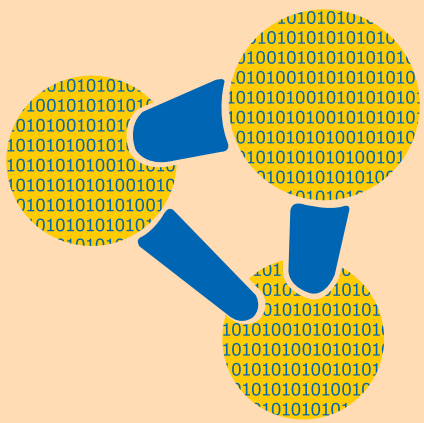
- 4x4 array accommodates 16 reactions in parallel
- Bottom-lit blue LEDs (465-470 nm) provide consistent light intensity

Built-in cooling fan provides consistent temperature across reactions

explore the known and unknown.

The most significant challenge in finding viable pathways is navigating the complex matrix of synthetic possibilities while accounting for what has been done, what could be done and what starting materials are available.

With Synthia™ retrosynthesis software, **you can easily analyze tens of thousands of pathways for known and novel molecules against your search criteria** - and quickly go from imagining what's possible to testing what's probable.

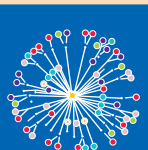


Coded by Chemists

Engineered by organic chemists and computer scientists over 15 years, Synthia™ harnesses the potential of advanced, highly nuanced algorithms powered by more than 60,000 hand-coded reaction rules. For each step that's analyzed, Synthia™ goes beyond looking at a few local interactions at the reaction center. The entire molecule is considered as well as potential conflict and selectivity issues in addition to providing stereo- and regioselective reactions.

Synthia™ explores novel and known solutions, eliminates nonviable options and presents the user with the most promising pathways

Three Design Modules to Amplify Your Approach:



Automatic Retrosynthesis

Computer-guided retrosynthetic design. Work back to commercially available building blocks while promoting preferred chemistries, minimizing cost and step count, and protecting groups.

Manual Retrosynthesis

Hands-on retrosynthetic design. Start with the target and walk iteratively backward through all possible reactions until you reach viable starting materials.

Known Network of Organic Chemistry

More than 10 million substances and reactions from literature. Quickly combine several syntheses into one optimized pathway based on cost, step count and frequency of substrates in literature.

Accelerate the Joy of Your Discovery

KitAlysis™ HTS Kits provide the optimal solution to quickly and efficiently identify suitable catalytic cross-coupling reaction conditions.

This unique off-the-shelf microscale screening platform:

- Runs 24 distinct cross-coupling reactions
- Designed and Validated by practicing medicinal and process chemists in some of the largest pharma companies in the world
- Comes with online tools

sterikon® plus - Bioindicators

The Sterikon® plus Bioindicator consists of an ampoule that contains a nutrient broth, sugar, a pH indicator and spores of a non-pahogenic organism, Geobacillus stearothermophilus ATCC 7953 (sporulation optimized). The thermal resistance is such that the spores are completely killed after 15 minutes, when heated in compressed steam at a temperature of 121° ± 0.5°C (245 kPa). At lower temperatures or lower exposure times a small number of spores can survive and are capable of growing. This can be detected by incubating the ampoules at 60°C ± 2°C for 48 hours. Sterikon® plus is recommended for routine autoclave monitoring for sterilization efficiency.

IN PROCESS TESTING

A complete solution for bioburden analysis

Membrane filtration is the standard test method for microbial contamination, complying with international standards such as Standard Methods for Examination of Water and Waste Water, US EPA, and EU testing procedures for drinking water.

The test sample is filtered through a microporous membrane, allowing the retention of any microbial contamination on top of the membrane. Rinsing removes residual product that might inhibit the growth of microorganisms.

Once the sample is filtered, nutrient medium is added to promote growth of microorganisms for recovery.
